

Mentor-review

HTTP requests

Redux

Project: To-Do List

! You need to submit the project for review

Congratulations on finishing half of Module 4! In this document, you will find a detailed description of your individual project. Please read it carefully.

Technical Information

Deadline

We don't have a strict deadline, but we recommend completing the project in 2 weeks.

Prerequisites

To participate in the project, you must have completed:

- All lessons in modules 1 to 3
- Lessons 1 to 4 in Module 4

This means mentors should have approved all your home assignments in these modules.

Task Description

Goal

Imagine you already work as a web developer. Your team has prepared a to-do list web application. Now, your task is to fill in the logic for HTTP requests and Redux store. This will allow users to create new tasks in the list and change or delete them if necessary.

Instructions

Download the code [from the Refocus GitHub repository](#).

Find the “README” file and explore it carefully. It contains instructions on how to start the application and what to do next. Follow them to complete the project. Replace all the “// TODO” comments in the code with the appropriate logic.

Add your own styling for the app if you want extra points.

Create a public repository on GitHub, and publish your project to it.

Documents to Hand In

A Word document with a link to a public GitHub repository containing the React app you developed.

How to upload the project

Create a Word document, insert the link to your GitHub repository, and upload the file here.
